Fault description

Fault status	Fault name	Fault description	Troubleshooting
Red light flashing	Over-voltage protection	when the controller input voltage exceeds 34V, the controller red light flashes and cannot be used normally. When the controller input voltage drops to 34V, the system automatically recovers.	This product should use DC29V 1.8A power supply, please check whether the power supply is used correctly and the power supply is working properly.
Red light on	Overload protection	When the load exceeds the set value (80KG), the controller starts overload protection.	This alarm can be lifted by removing part of the table weight and re-powering the controller after a power failure.
	Overheat protection	Motor overheating protection will be activated after 2min of uninterrupted motor operation .	The control system can be re-powered to release this alarm or wait for 18min to operate normally.
	Power-on reset	The system fails to save the current position.	This alarm can be cleared by a reset operation.
	Blocking protection	When the motor is blocked.	This alarm can be cleared by a reset operation after the motor fault has been fixed.
	Motor failure	Disconnected / loose / faulty motor connection cable.	Check all motor connections to the controller and ensure that they are secure, then disable this alarm by resetting.
	Retreating when encountering obstacles	During operation, after a sudden obstruction, the movement stops and runs 30 mm in the opposite direction.	Please ensure that the desk does not vibrate significantly, hit an obstacle or tilt during operation.
